## Acquisition Board PC 10 U

Stand alone Module for Networks (Modbus, Ethernet, TCP/IP...), the PC 10 U is dedicated for measurement, monitoring and storage of digital and analogue signals issued from electrical and physical sensors.

The configuration and the use of the PC 10 U are performed via two easy and user-friendly software, compliant to the latest Norms and Market's requirements (Cartography, Validation, FDA...).The configuration and data processing software LTC10 and the real time monitoring software LW1.

An automated management of the memory and of the e-mail sending enable to the PC10 to perform the monitoring and the supervision of parameters such as temperature, voltage, current and resistance. Combining accuracy and easy to use, the PC10U is a real alternative to PC boards and acquisitions units.
